BOOKS

Neuroéthique : Quand la matière s’éveille
Evers K. Traduit de l’anglais par Delphine Chapuis-Schmitz.

La neuroéthique: Ce que les neurosciences font à nos conceptions morales

Deep brain stimulation: A new treatment promise in the most difficult cases

The science behind what makes us unique

Happy pills in America: From Miltown to Prozac

The age of anxiety: A history of America’s turbulent affair with tranquilizers

Before Prozac: The troubled history of mood disorders in psychiatry
ARTICLES

Brain imaging and brain privacy: A realistic concern?

Autonomy is (largely) irrelevant

The target of the self and the arrows of volition and self-representation

Neuroscience and the soul
   Farah MJ and Murphy N. Science 2009: 1168.

Human subjects protections in biomedical enhancement research: assessing risk and benefit and obtaining informed consent

Human nature and enhancement

The persuasive power of brain scan images

Benedict XVI, death and progress of science

Towards an evidence-based ‘medicine of the person’: the contribution of psychiatry to health care provision

To lock or not to lock patients’ rooms: the key to autonomy?
An analysis of patient rights violations in psychiatric hospitals in Japan after the enactment of the Mental Health Act of 1987

Borderline and antisocial personality disorders: summary of NICE guidance

A holistic approach to the use of pediatric fMRI

Working with brain scans: digital images and gestural interaction in fMRI laboratory

Expanding the concept of motivation to change: the content of patients' wish to recover from anorexia nervosa

The antidepressant debate and the balanced placebo trial design: an ethical analysis.

An educational multimedia campaign improves stroke knowledge and risk perception in different stroke risk groups.

The scientific contributions of Paul D. MacLean (1913-2007)

Ethical challenges and interpretive difficulties with non-clinical applications of pediatric FMRI
Considering the long term in the short term use of fMRI in the classroom  

Functional magnetic resonance imaging (fMRI) in the classroom  

A neuroimaging perspective on the use of functional magnetic resonance imaging (fMRI) in educational and legal systems  

Children in non-clinical functional magnetic resonance imaging (fMRI) studies give the scan experience a "thumbs up"  

Enthusiasm for functional magnetic resonance imaging (fMRI) often overlooks its dependence on task selection and performance  

Ethical and regulatory issues in pediatric research supporting the non-clinical application of fMR imaging  

Considerations for pediatric neuroimaging at the translational coalface  

What we should really worry about in pediatric functional magnetic resonance imaging (fMRI)  

Advancing neuroregenerative medicine: a call for expanded collaboration between scientists and ethicists  
Out on a limb: the ethical management of body integrity identity disorder

Minimally conscious state and human dignity

Will neuroscientific discoveries about free will and selfhood change our ethical practices?

Neuroethics as a brain-based philosophy of life: the case of Michael S. Gazzaniga
Rasmusson A. Neuroethics 2008; 2(1): 3-11

Neonatal pain relief and the Helsinki Declaration

Reversing the "irreversible": heart donation after cardiac death

The Wellness Recovery Action Plan (WRAP): workshop evaluation

Preparing family caregivers for death and bereavement. Insights from caregivers of terminally ill patients.

Invited commentaries on... Abortion and mental health disorders

Attention-deficit/hyperactivity disorder: how much responsibility are pediatricians taking?
Ethno-psychopharmacology: Advances in Current Practice  
Fleisher MH. JAMA. 2009; 301:976-977.

Health insurers and medical-imaging policy — A work in progress  

Antipsychotic Risks  

Clinical trial participation poses ethical, practical issues  

NEWS

Drug development raises ethical issues
